α (alpha)
  controlling across important hypotheses, 75
  defined, 42, 44
  limiting chances for, 45
  power affected by, 45
  for sample-size calculation, 226
  scaling sample size for, 373
  spending strategy, 76
  Type I error inflation, 74–75
  usual level of, 46
* (asterisk)
  multiplication indicated by, 21
  powers indicated by (**), 22
β (beta), 42, 44
[ ] (brackets), multiplication indicated by, 21
^ (caret), powers indicated by, 22
{ } (curly braces), multiplication indicated by, 21
= (equal sign), equations indicated by, 26
γ (gamma) as skewness coefficient, 113
κ (kappa)
  for Cohen's Kappa, 202
  for Pearson kurtosis index, 114
– (minus sign), 20–21
( ) (parentheses), multiplication indicated by, 21
π (pi, lowercase) constant, defined, 19
Π (pi, uppercase) as array symbol, 29
+ (plus sign), addition indicated by, 20
· (raised dot), multiplication indicated by, 21
/ (slash), division indicated by, 22
| | (vertical bars), absolute value indicated by, 25
1-dimensional arrays, 26–27
2-dimensional arrays, 27, 28
3D charts, avoiding, 105

• A •

absence of harmful effects, 211–212
absolute values, indicating, 25
accuracy
  defined, 38, 121
  improving for measurements, 126–127
  improving for sampling, 126
  overall, 198, 281
  precision versus, 38–39, 121
  of sample statistic, 123
  systematic errors affecting, 124–125
actuarial table. *See* life table
addition
  mathematical operator for, 20
  sums of array elements, 28–29
addresses, recording, 96
administrative details for a study, 70
adverse events, handling, 69
aims of a study, 61, 62
Akaike's Information Criterion (AIC), 277, 295, 352
Algebra I For Dummies (Sterling), 17, 30
Algebra II For Dummies (Sterling), 17
alignment charts (nomograms), 59–60, 170–171, 208
alpha (α)
  controlling across important hypotheses, 75
  defined, 42, 44
  power affected by, 45
  for sample-size calculation, 226
  scaling sample size for, 373
  setting a value for, 45
  spending strategy, 76
  Type I error inflation, 74–75
  usual level of, 46
alternate hypothesis ($H_{1\ or}\ H_{Alt}$), 41
alternative models, comparing, 297–298

analysis of covariance (ANCOVA), 158, 160–161
analysis of variance (ANOVA)
  basic idea of, 164–165
  for data grouped on different variables, 158
  for dissimilar standard deviations, 158
  interpreting output of, 166–168
  one-way, 157
  one-way, three-level, 157
  one-way, two-level, 157
  post-hoc tests, 165–166
  running, 166
  on summary data, 168–169
  for three or more groups, 157
  three-way, 158
  variance table, 166–167
  Welch unequal-variance, 158
analytical populations, 67, 69
analyzing your data. *See* data analysis
and rule for probability, 32–33
animal studies, 79
antilogarithm (antilog), 24
apps, 48, 58
arithmetic mean, 107
arrays, 26–29
assay sensitivity, 214
asterisk (*)
  multiplication indicated by, 21
  powers indicated by (**), 22
attrition, sample-size estimation allowing for, 374
average value, 41. *See also* comparing averages

• B •

background information for a study, 68
balanced confidence interval, 135
bar charts, 105, 118–119. *See also* histograms
baseline hazard function, 342
baseline survival function, 342–344
beta (β), 42, 44
between-group difference, 200–201
bimodal distribution, 106, 108
binary logarithms, 23
binary variables, 189, 193–194, 254
binomial distribution, 37, 362
bio-creep, 218
bioequivalence, 211
bioequivalence studies (BE), 88, 212, 213, 214, 215
blinding, 65, 69
Bonferroni adjustment, 75
Bonferroni test, 165
Box plots, 119–120
box-and-whiskers (B&W) charts, 119–120
Box-Cox transformation, 117–118
brackets ([ ]), multiplication indicated by, 21

• C •

calculators
  cross-tabulated data for, 174
  for error propagation, 150–151
  for fourfold tables, 190
  for power, 48
  printed, 59–60
  scientific and programmable, 57
  web-based, 48, 58–59, 150–151, 190
calibrating instruments, 126–127
caret (^), powers indicated by, 22
Case Report Form (CRF), 63, 72
case-sensitivity, 20, 25
categorical data
  coding categories carefully, 96–97
  in data dictionary, 102
  graphing, 105
  multi-level categories, 97–98
  odds ratios for predictors, 286–287
  recording, 96–98
  summarizing, 104
  tabulating to check errors, 101
categorical variables
  cross-tabulation by, 104
  defined, 35
  for multiple regression, 254–255
  recoding as numerical, 255–256
  reference level, 255
cells and tissues, studies on, 79
censored data. *See also* estimating censored data
  example, 315–316
  reasons for, 315

recording censoring information, 327–328
techniques for handling, 316–317
techniques not applicable to, 317–318
Centers for Disease Control, 56
centiles, 112, 329
central limit theorem (CLT), 127, 137
central tendency of data, 107–110
certification, 72
charts. *See* graphs and charts; tables
chemical studies, 79
chi-square distribution, 366–367
chi-square test. *See* Pearson chi-square test
CI. *See* confidence interval
CL. *See* confidence interval (CI)
clinical research. *See also* drug development
analyzing your data, 73–76
collecting and validating data, 72–73
conducting a study, 70–73
data collection and validation, 72–73
designing a study, 61–70
as focus of this book, 1, 11
protecting your subjects, 70–72
validating data, 72–73
cloud-based software, 59
clustered events, Poisson regression with, 298
coding data
categorical variables as numerical, 255–256
for gender, 96–97
for missing values, 98, 99
for multi-level categories, 97–98
numerical data, 99
coefficient of determination, 247
coefficient of variation, 111
Cohen's Kappa (κ), 202
collecting data, 72–73
collinearity, 263–264, 285
common logarithms, 23
comparing averages
for data grouped on different variables, 158
for within-group changes between groups, 160–161
for matched sets, 159–160
mean to hypothesized value, 156
nuisance variable adjustment for, 158
situations requiring, 155–156
for three or more groups, 157
for two groups, 156–157
comparing survival between groups. *See also* survival regression
in complicated situations, 337
Kaplan-Meier method for, 330
life-table method for, 330
log-rank test for, 332–336
sample-size estimation, 337–338, 371–372
complete separation problem, 287–288
computer software. *See also* software
case-level data with, 174
case-sensitivity of, 25
commercial, 52–55
demo versions, 52
development of, 51–52
free, 55–57
indicating factorials in, 24
for logistic regression, 274–275
for log-rank test, 333
for multiple regression, 254–258
for power calculation, 48
spreadsheet programs, 54
concordance, 352
confidence interval (CI)
around means, 137–139, 142
around proportions, 139
around regression coefficients, 141
assessing significance using, 141–142
balanced versus unbalanced, 135
calculating for rate ratio, 207, 208
for Cohen's Kappa, 202
described, 12, 40, 134
for equivalence and noninferiority, 215–217
formulas for large samples, 136–137
keeping as narrow as possible, 135
no-effect values, 141
normal-based, multipliers for, 137
one-sided, 136
p value compared to, 142
for precision of incidence rate, 205–206
as range of values, 134
standard error versus, 134
upper and lower limits of, 195

confidence limit (CL). *See* confidence interval (CI)
confidentiality, 70
confounders (nuisance variables), 158, 187–188
confounding, 65
constants. *See also specific types*
  explicit versus symbolic representation of, 19
  in linear functions, 231
  standard error multiplied or divided by, 147
  standard error not changed by adding or subtracting, 146
continuous variables, 35
co-primary endpoints, 85
correlation coefficient
  described, 193
  Pearson, 222–226
  straight-line regression, 247
  tetrachoric, 193–194
correlation coefficient analysis
  precision of r value, 224–225
  r significantly different from zero, 223–224
  regression analysis versus, 239
  sample size required for test, 226
  significant difference in two r values, 225
correlation, defined, 221, 222
covariates for survival, 330
Cox PH regression, 341–345
CRF (Case Report Form), 63, 72
crossover structure of a study, 64
cross-tabulation. *See also* fourfold tables
  for comparing proportions, 174
  described, 173
  Fisher Exact test, 181–185
  fourfold tables, 173, 174, 189–202
  Kendall test, 185–187
  Mantel-Haenszel chi-square test, 187–188
  marginal totals or marginals, 173
  Pearson chi-square test, 174–181, 183–185, 186
  by two categorical variables, 104
curly braces ({ }), multiplication indicated by, 21
