academic writing, 261, 263, 264
achievement emotion scale (AEQ), **187**
activation deactivation adjective checklist (AD ACL), **187**
activity emotions, 184
activity theory, 54, 69, 71
  contradictions and expansive learning, 97–8
  and empirical research, 101
  Engeström's approach, 97
  'first-generation' activity theory, *94*
  in healthcare setting, 100
  historicity and cultural change, 95
  Latour's actor–network theory, 99
  limitations, 101–2
  psychological tools, 96
  secondary care setting, 100–101
  second-generation AT, 95, *96*
  semiotic mediation, 94–5
  and social theories, 98
  sociocultural construction, 93–4
  sociocultural theory, 98–9
  third generation AT, *97*
  in undergraduate medical education, 99–100
actor–network theory (ANT), 69, 76
analysis, design, development, implementation and evaluation (ADDIE) model, 193–4, *194*
  analysis phase, 194, 204
    CTA *see* cognitive task analysis (CTA)
    learning, taxonomies of, 195–6
  design phase, 194, 204
    four-component instructional design (4C/ID), 200–201
    learning tasks, **199**, 199–200
  development phase, 194, 201–2, **202**, 204
  evaluation phase, 195, 203–4, 204
  implementation phase, 194–5, 202–3, 204
attraction-selection-attrition (ASA) theory, 170–171
authenticity criteria, research, **63**
  independent coding and expert panels, 62
  respondent feedback, 62–3
  thick description and audit trails, 63
  triangulation, 63
authentic leadership, 273
autobiographical recall procedure, 186
autonomic nervous system (ANS), 186

B
behaviouralism, 106
behaviourism, 16, 18, 106, 204, 222

C
circular mood scale (CMS), **187**
clinical medical education
  deliberate practice
    features, 224–5
    research agenda, 226–7
    skill domains, 223
    sports, 223–4
  disadvantages, 231
  healthcare quality, 233
  history, 220–221
  mastery learning
    properties, 225
    research agenda, 226
  medical expertise
    expert performance approach, 222–3, **223**
    professional consensus, 221–2
  non-traditional, 232
  reframing research, WP *see* widening participation (WP)
  translational education outcomes, 225–6
  widening access
    definition, 232
    meritocrats, 237
    policy enactment, 238–40
    quality, UK case study, 233–4, **234**
    theory and conceptual frameworks, 231
cognitive architecture
  primary knowledge, 207
  secondary knowledge, 207
    borrowing and reorganising principle, 208
    environmental organising and linking principle, 208
    information store principle, 207–8
    narrow limits of change principle, 208
    randomness as genesis principle, 208
  X-rays, 208–9
cognitive load theory
  architecture *see* cognitive architecture
  effects, 214–15
  efficiency measures, 212
  element interactivity, 209
  extraneous cognitive load, 209–10, *210*
  germane cognitive load, 209–10
  indirect measurement, 211
  intrinsic cognitive load, 209–11, *210*
  mental effort, 207
  multiple indicators, 212
  physiological measures, 212–13
  psychometric instrument, 212, **213**
  secondary tasks, 213
  specific instructional feature, 212
  subjective rating scales, 211–12
  training and practice, 207
cognitive task analysis (CTA)
  behavioural analysis, 196
  educational programmes, 198–9
  information processing analysis, 196
  nephrostomy, 198
  non-recurrent aspects, 197, **197**
  procedural analysis, 196
  recurrent aspects, **197**, 197–8
  rule-based analysis, 196
  skills decomposition, 196–7, **197**, *198*
collaborative research, 290
collective leadership, 270
complexity theory, 19, 69, 70
  adaptation, 84–5
  applications of, 86
  attractors, 85
  butterfly effect, 85
  clinical education research, 88–9
  definition, 81–2
  emergent properties, 85
  fuzzy boundaries, 85–6
  linearity and non-linearity, 83–4
  neologisms, 88
  nested and interacting systems, 85–6
  notes of caution, 88
  origin, 84
  PBL, 88
  simple, complicated and complex problems/systems, 82–3
  surgical teamwork, 87
Consolidated Standards of Reporting Trials (CONSORT), 7
constructivism, 18
  authenticity criteria, 62–3
  case study, 58
  confirmability, 62
  constructivist reflexive research practice, **61**
credibility, 61–2
dependability, 62
document analysis, 60
ethical validity, 56
ethnography, 58
grounded theory, 58, 249
interviews, 59
learning and development, 53–4
literature, role of, 63–4
narrative research project, 57
observation, 60
personal constructivism, 53
phenomenology, 57
randomised controlled trials, 63
reflexivity, 64
relativist ontologies, 55
researcher, role of, 60–61
self-regulated learning, 157–60
social constructivism, 53, 289
subjectivist, 55
substantive validity, 56
time commitment, 64
transactionalism, 55

Researching Medical Education, First Edition. Edited by Jennifer Cleland and Steven J. Durning.

constructivism (*continued*)
transferability, 62
worldview, education research, 18
Continuity of Care Experiences (COCE) program, 124–5
control-value theory, 184
Core Entrustable Professional Activities for Entering Residency (CEPAER), 222
correlational research, 5
critical discourse analysis (CDA), 109, 251
criticalism, 17, 19–20
critical-realist approach, 219
cultural-historical activity theory (CHAT), 71

D
decision-making processes, 58, 84, 114, 147, 196
deliberate practice (DP)
features, 224–5
research agenda, 226–7
skill domains, 223
sports, 223–4
descriptive research, 5
discourse analysis
critical discourse analysis, 109, 251
empirical, 250
Foucauldian discourse analysis, 251–3
formal linguistic, 250

E
eclectic approaches, 148–9
education research, 277
emotions and learning
affect-as-information model, 183
autonomic nervous system, 186
appraisal theory, 183–4
autobiographical recall procedure, 186
challenges, 186
cognitive resources, 184
control-value theory, 184
dimensional approach, 182–3
discrete approach, 182–3
emotion, 182, **182**
facial expressions, 186
films, 185
incidental *vs.* integral emotions, 183
interest and motivation, 185
memory, 184–5
mood, 182, **182**
music, 185–6
negative emotions, 188–9
non-verbal measures, 186
vs. rational dichotomy, 188
self-regulated learner, 188
self-regulatory processes, 185
self-report measures, 186–7, **187**
strategies, 184
Velten method, 186
empirical research, 101
entrustable professional activities (EPAs), 222
epistemology, 3, 17, 20, 38, 51, 52, 53, 118, 130, 283, 289, 290
experimental research, 6, **6**
expert performance approach, 222–3, **223**
extraneous cognitive load, 209–10, *210*, **213**

F
facial action coding system (FACS), 186
Feeling Scale (FS), **187**
felt arousal scale (FAS), **187**
fit theory, 172
five factor model (FFM), 169
Foucauldian discourse analysis (FDA)
definition, 251
discourse analysis, 252–3
methodological importing, 250, 252–3
four-component instructional design (4C/ID), 200–201
four-dimension mood scale (4DMS), **187**

G
germane cognitive load, 209–10
grounded theory (GT), 21, 102, 148
borrow techniques, 246
constructivism, 249–50
definition, 249
methodological shifting, 248–9
post-positivist methodology, 249
Symbolic Interactionism, 249
